

VCS Canvas Geometry

[Contents](#) [Previous](#) [Next](#)

Goal: To introduce you to VCS Canvas geometry.

Reselect the "clt" Variable in the "Variable" selection window. This will reinitialize the "Dimension Manipulation Panel". Select the orange "Plot" button to display the "clt" data set.

To change the VCS Canvas Geometry, depress the "Option" menu to the right of "VCS Canvas 1". Then move the pointer over the "Set VCS Canvas Geometry..." item and select.

The "VCS Canvas 1 Geometry" window will appear.

The values for "Width" and "Height" are determined by the size of the VCS Canvas. Reset width value to 400, height to 350, x-position to 100, and y-position to 200. Select the "Preview" button at the bottom of the page to preview the changes to the VCS Canvas.

Select the "Cancel" button on the "VCS Canvas 1 Geometry" GUI. This action will not retain geometry changes.
